Abstract

This paper discusses tone patterns of possessive constructions in Asante Twi within the framework of autosegmental phonology. Asante Twi is one of the dialects of Akan. I have limited myself to only one dialect of Akan because it is not easy to make an in-depth study of tonal behaviour of Akan as one language. The paper is divided into four sections. Section 1 is the introductory section. Section 2 discusses the tone patterns of alienable and inalienable nouns. Section 3 also presents the tone patterns of superior and non-superior nouns. The final section discusses the tone patterns of the possessive noun phrase whose nouns have the tone patterns LH, HH, LL, and HL.

Keywords: Tone, Possessives, Asante Twi

1.0 Introduction

Like stress and intonation in English, tone is also considered as a non-segmental feature of speech which can be used to bring about differences in the meaning of words which are otherwise identical. The meaning of a word in a language can change by merely changing the pitch level at which the word is said. The Akan examples in 1 and 2 from Owusu (2014) show how differences in pitch are used to distinguish one word from another.

1. (a) [kɔ̀r̩á] ‘never’
   (b) [kùr̩á] ‘calabash’

2. (a) [áʃɔ́] ‘a girl’s name’
   (b) [ásɔ́] ‘hoe’

Languages such as Igbo, Ewe and Akan in which pitch variation on syllables may alter the meaning of the word are classified as tone languages. According to Crystal (1995) more than half the languages of the world are tone languages. The distinctive pitch levels of these languages are referred to as tones. Akan has two basic register tones – High tone (H) and low tone (L). The tone of a noun in Akan in possessive noun phrase may be different from when it occurs in isolation or in other constructions. The following examples in 4 and 5 from Dolphyne (1988) illustrate this.

3. [kòfí jàmí sù] ‘Kofi Nyame is big /fat’
4. [kòfí nàlìmí sù] ‘Kofi’s God is great’

As far as the tone patterns of the possessive noun phrase in the Asante dialect are concerned, Dolphyne (1986, 1988) groups Asante’s nouns into two classes; Class I and Class II and posits a stem initial floating High tone between the possessor noun and the possessed noun. She continues that the associative High tone spreads to the stem initial syllable of the possessed noun in the case of Class I nouns. However, with Class II nouns, it spreads to the final syllable of the possessor noun as illustrated in fig 1 below:
Dolphyne (1988) however remarks that this explanation for the tonal relationship between the elements of a possessive noun phrase does not fully account for all the instances of tonal variation that occur in the Asante possessive noun phrase. This is because where the possessor element is a noun that ends in Low tone, the spreading of the associative High tone is blocked, that is it does not take place whether the noun is class I or class II as in 5 and 6.

5. /\d\d\d\ sìká/ → [\d\d\d\ sìká] ‘Addo’s money’
6. /\d\d\d\ pàpá/ → [\d\d\d\ pàpá] ‘Addo’s father’

In this paper, our focus is on the possessive noun phrase with the possessive adjective rather than noun-noun possessive noun phrase. This is because the tone pattern of the possessor noun does not normally change in the possessive noun phrase. The possessive adjective in Akan, [mi] ‘my’, [wo] ‘your’, [ni] ‘his’, [yɛn] ‘our’, [mu] ‘your (plural)’, [wɔn] ‘their’ is said on high tone when uttered in isolation (Department of Linguistics, University of Ghana 2006). The tone pattern of the possessive noun phrase involving the possessive adjective is always determined by the type of noun involved; that is, whether the possessed noun is alienable or inalienable noun, whether it is superior or non-superior kinship noun, and the tone pattern of the possessed noun.

2.0 Alienable and Inalienable Nouns

With the exception of the word for ‘hair’ [ɛnụ], the possessive adjective in Asante is said on Low tone when it occurs before inalienable nouns. It is however said on High tone when it occurs before alienable nouns, as in 7 to 11.
Inalienable Alienable

7. (a) [mɪ̀ ì́] (b) [mɪ̀ !ùrɛ] ‘my head’
8. (a) [mɪ̀ ëqì̃i] (b) [mɪ̀ !ëqì̃i] ‘my nose’
9. (a) [mɪ̀ nãi] (b) [mɪ̀ !ãi] ‘my leg’
10. (a) [mɪ̀ tʊ] (b) [mɪ̀ !tʊ] ‘my buttocks’
11. (a) [mɪ̀ kɔʊ] (b) [mɪ̀ !kɔʊ] ‘my neck’

The alienable nouns above may refer to parts of a carcass. They may be preceded by nominal prefixes. These nominal prefixes are said on Low tone when the words occur in isolation as in 12 – 16.

12. [ɛtɪrɛ] ‘head’
13. [ëqì̃i] ‘nose’
14. [ɛnãi] ‘leg’
15. [ëtʊɪ] ‘buttocks’
16. [ëkɔʊ] ‘neck’

When the nominal prefix is deleted in a possessive construction, its Low tone becomes a floating tone, and causes the initial syllable of the stem (which is on a High tone) to be down stepped. With inalienable nouns, the Low tone of the deleted nominal prefix spreads to the preceding possessive adjective as illustrated in fig 2.

3.0 Superior and Non-Superior Nouns

The tone pattern of the possessive adjective in the Asante dialect enables us to distinguish between kinship nouns that refer to older relations (superior nouns) and those that refer to younger relations (non – superior nouns). The possessive adjective maintains its High tone before superior nouns. It is however said on Low tone when it occurs before non – superior nouns as in 17 to 22.
Superior Nouns Non-Superior Nouns

17. (a) [mɪ́wɔ̀fà] ‘my uncle’ (b) [mìwɔ́fàásí] ‘my nephew’
18. (a) [mì nàà] ‘my grandparent’ (b) [mìná!ná] ‘my grandchild’
19. (a) [mìpìpá] ‘my father’ (b) [mìbá] ‘my child’
20. (a) [mì ‘kùnú] ‘my husband’ (b) [mìjìri] ‘my wife’
21. (a) [mìmààmì] ‘my father’ (b) [mìbá] ‘my child’
22. (a) [mìwùrà] ‘my master’ (b) [mì’akú’lá] ‘my slave’

4.0 Tone Patterns of Other Nouns in Possessive Constructions

Tone patterns of possessive noun phrase whose nouns do not belong to any of the groups discussed above are always determined by the tone patterns of the nouns involved. This section looks at the tone patterns of possessive noun phrase whose nouns have tone patterns LH, HH, LL, and HL.

4.1 Nouns with Low-High Tone Patterns

Most nouns with LH tone patterns have vowel or syllabic nasal nominal prefixes which are always said on Low tone. When the nominal prefix is the low vowel [a], the vowel in the possessive adjective is deleted provided the possessive adjective is [mì], ‘my’ [wɔ́], ‘your’ or [nì], ‘his/her’.

The representation in Fig 3 illustrates this tonal phenomenon.

Fig. 3

When the nominal prefix is a syllabic nasal instead of a vowel, both the nasal prefix and the possessive adjective are said on high tone, and the initial stem syllable becomes a down stepped High tone, as shown in 30–34.

30. /mìmpá/ ➔ [mì mplá] ‘my bed’
31. /mìnsá/ ➔ [mì nlásá] ‘my drink’
32. /mìnsúó/ ➔ [mì nlsúó] ‘my water’
33. /mì jìnáí/ ➔ [mì jìnáín] ‘my salt’
34. /mìnjùkò/ ➔ [mìnjùkò] ‘my chickens’
The preceding High tone of the possessive adjective spreads onto the following Low tone syllabic nasal prefix. In effect, the Low tone on the syllabic prefix becomes a floating tone and causes the following High tone on the initial stem to be down stepped. This is illustrated in Fig 4 below.

**Fig 4**

```
C V X C V C V X C V
m i m p a m i m p a
H L H H L
```

The same tonal phenomenon occurs when the Low-High noun does not require a nominal prefix as in 35-39.

35. mí sîká mì sîlká → ‘my money’
36. mí kûbê → mí kûlbé ‘my coconut’
37. mí kâtâ → mí kâltâ ‘my mat’
38. mí pûmá → mí pûlmá ‘my walking stick’
39. mí bidié → mí bididé ‘my charcoal’

### 4.2 Nouns with High – High Tone Patterns

Most Akan nouns with High-High tone patterns may be preceded by vowel nominal prefixes which are said on Low tone. In the possessive construction with the possessive adjective, this Low tone vowel prefix is deleted but its tone remains. This floating Low tone of the deleted prefix causes the initial stem syllable of the noun to be downstepped, as in 40-43.

40. /mî ðuqûá/ → [mî 'ðuqá] ‘my sheep’
41. /mî ñsým/ → [mî 'ñsým] ‘my service’
42. /mî bûrnê/ → [mî 'bûrnê] ‘my time’
43. /mî bûnê/ → [mî 'bûnê] ‘my stone’

The representation in Fig 5 below illustrates this tonal phenomenon.

**Fig 5**

```
G Y Y G Y X G Y G V X
m i o s u m m i o s u m
H L H H H H L H H
```

The possessive adjective is however said on Low tone if the High – High disyllabic nominal stem does not require a nominal prefix as in 44.

44. /mîpápá/ → [mîpápá] ‘my good deeds’
4.3 Nouns with Low–Low Tone Patterns
There are very few disyllabic nouns with Low-Low stems in Akan. In possessive constructions with the possessive adjective, the initial syllable of these nouns is said on High tone while the possessive adjective is said on Low tone as in 45 – 47.

45. /mɪkɛtɛ/ → [mɪkɛtɛ] ‘my kete’ (traditional dance)
46. /mìàgò/ → [mìàgò] ‘my velvet’
47. /mìpàpà/ → [mìpàpà] ‘my fan’

4.4 Nouns with High–Low Tone Patterns
Nouns with High–Low tone patterns are very few in Akan, and many if these nouns are English loan words. The tone pattern of these nouns does not change in the possessive noun phrase with the possessive adjective. The possessive adjective is however said on low tone as in 48 – 54.

48. /mìfòtò/ → [mìfòtò] ‘my photo’
49. /mìlɪtà/ → [mìlɪtà] ‘my letter’
50. /mìtìfɛ̀/ → [mìtìfɛ̀] ‘my teacher’
51. /mìtájà/ → [mìtájà] ‘my tyre’
52. /mìpàjà/ → [mìpàjà] ‘my pear’
53. /mìsòfì/ → [mìsòfì] ‘my shovel’
54. /mìlɔrì/ → [mìlɔrì] ‘my lorry’

5. Conclusion
The tone pattern of the possessor noun (i.e. the noun that is used to show possession) does not normally change in the Asante possessive noun phrase. When the noun that is used to show possession is replaced with a possessive adjective, the tone on the possessive adjective is always determined by the tone pattern of the possessed noun. In effect, the tone pattern of the possessive noun phrase in the Asante dialect is determined by the tone pattern of the possessed noun involved.
